Introduction

Who We Are

Abbasi Al Arabia is a modern, rapidly developing integrated-solutions company serving the Kingdom of Saudi Arabia. We specialize in Consultancy, Construction, General Maintenance, Third party Man Power Supply, and Metal Fabrication — delivered as one connected engineering offering rather than separate services.

We operate as a full-service partner across both the project and post-project phase — from initial design and execution through to long-term operation and maintenance.

Our core expertise spans Civil Works, Mechanical & HVAC, Electrical & ICT, Fire & Life Safety and Security Systems, General Maintenance, Industrial Tools Supply, Metal Fabrication, and dedicated Manpower Supply — delivered by a single, accountable engineering partner.

Supported by a growing multidisciplinary team and an in-house fleet of engineers, technicians, and skilled tradespeople, we mobilize quickly across the Kingdom and scale our resources to match each client's schedule and technical complexity.

Every engagement is guided by strict adherence to international quality, safety, and environmental standards, backed by a proven track record delivering for energy majors, giga-project developers, and leading EPC contractors across Saudi Arabia.

From concept to completion, we deliver engineering solutions built to last.

"Integrated engineering services delivered in accordance with local and international standards."

Vision & Mission

The principles that guide every project we deliver

Vision

To be the preferred and trusted market leader in integrated Construction and Facilities Management — recognized for our pioneering commitment to quality, sustainability, and efficiency, thereby driving the Kingdom's future development.

Mission

To deliver sustainable, client-centric, and professional engineering services across Civil, MEP, ICT, and Facilities Maintenance — guaranteeing the optimal performance, longevity, and compliance of our partners' assets.

What We Do

A full-service integrated partner across the asset lifecycle

Abbasi Al Arabia operates as a full-service integrated partner delivering end-to-end life-cycle solutions across the Kingdom of Saudi Arabia — from the initial execution of complex construction projects (Civil, MEP, ICT) to dedicated long-term maintenance, fire & life safety, and security systems support.

Core Expertise

Consultancy & Construction

Consultancy

We deliver comprehensive consultancy solutions for construction projects, supporting every stage from feasibility and design through tendering, execution, and successful project completion.

Our expertise spans project management, cost estimation, contract administration, project monitoring, scheduling, progress reporting, technical documentation, and Building Information Modeling (BIM), ensuring efficient project execution, transparent reporting, and full compliance with local and international industry standards.

We also provide technical advisory and design review services, evaluating engineering drawings, specifications, and value-engineering options to optimize constructability, cost, and schedule. Our consultants work closely with clients from concept through handover, safeguarding design intent, quality benchmarks, and regulatory compliance at every stage of the project lifecycle.

Construction

Our Construction Division specializes in the execution of complex Civil and Infrastructure projects, delivering fully integrated, high-quality solutions tailored to meet the unique requirements of each client. With extensive expertise in infrastructure development, we undertake the construction of roads, highways, utility networks, stormwater and drainage systems, water and wastewater pipelines, earthworks, site development, marine and industrial facilities, and associated civil infrastructure, ensuring seamless integration with building and industrial projects.

Backed by technical expertise, experienced professionals, and a commitment to excellence, we ensure every project is executed with precision, efficiency, and strict adherence to international quality, safety, and environmental standards. We employ innovative construction methodologies, advanced project management practices, and rigorous quality control systems to consistently deliver projects on schedule and within budget.

Core Expertise

General Maintenance, Industrial Tools & Metal Fabrication

General Maintenance

We provide comprehensive, end-to-end Facilities Management solutions designed to maximize the performance, reliability, and longevity of built environments. By seamlessly integrating our expertise in Civil, MEP, and ICT systems with proactive, scheduled, and preventive maintenance programs, we ensure efficient operations, minimize downtime, and optimize facility performance across HVAC systems, electrical networks, plumbing and drainage systems, fire and life safety systems, mechanical equipment, and building automation systems.

Our commitment to quality, safety, and operational excellence enables us to create secure, functional, and sustainable environments that enhance occupant comfort while delivering long-term value and cost efficiency for our clients. Through rapid emergency response, disciplined spare-parts management, and continuous performance monitoring, we help clients extend asset life, reduce operational risk, and maintain uninterrupted, reliable service across every facility we manage.

Industrial Tools & Metal Fabrication

Our Industrial Tools Supply and Metal Fabrication capabilities are integral to our engineering and project delivery approach, serving as strategic extensions of our core expertise rather than standalone services. By seamlessly integrating high-quality industrial supplies, precision cutting, welding, and structural steel fabrication with in-house engineering, we enhance project efficiency, quality, and execution reliability across pipe racks, platforms, ductwork, and custom metal structures.

This vertically integrated model enables Abbasi Al Arabia to deliver comprehensive, end-to-end solutions with greater control over quality, schedules, and costs. As a self-sufficient engineering and construction partner, we provide clients with responsive support, customized manufacturing solutions, rigorous quality inspection, and a dependable supply chain that contributes to the successful, on-time delivery of every project, from initial concept through final installation.

Core Expertise

Electromechanical Installations & Third-Party Manpower Supply

Electromechanical Installations

Our Electromechanical Installations division delivers complete MEP execution across HVAC systems, medium-voltage (MV) and low-voltage (LV) power distribution, standby generators, fire alarm and fire-fighting systems, structured cabling, security systems, and precision cooling — engineered and installed to meet the exacting requirements of commercial, industrial, and infrastructure projects across the Kingdom.

From detailed engineering and procurement through installation, we apply rigorous quality control at every stage, coordinating interfaces across disciplines to prevent clashes, delays, and rework on site, while maintaining strict compliance with international codes and manufacturer specifications.

Every installation concludes with comprehensive testing and commissioning — performance verification, load testing, and system handover documentation and warranty support.

Third-Party Manpower Supply

We supply skilled and non-skilled manpower to strengthen client operations across facility management, construction, and specialized company expertise. Our workforce includes technicians, engineers, tradesmen, supervisors, helpers, and general labor, deployed flexibly across both short-term project requirements and long-term site assignments throughout the Kingdom.

We also provide highly qualified professionals to strengthen project teams across key functions, including project management, construction supervision, quality assurance and quality control (QA/QC), health, safety and environment (HSE), risk management, and environmental compliance.

Every candidate is pre-qualified, trained, and mobilized to meet client-specific competency, certification, and safety requirements, enabling flexible workforce scaling without compromising quality, productivity, or on-site safety standards across all deployments.

Our Approach

Our commitment to service excellence

01

24/7 Support

Round-the-clock coverage for every critical client system and piece of infrastructure.

02

Helpdesk

A centralized Helpdesk & Call Center logs and tracks every request the moment you call.

03

Response & Resolution

Priority response for emergency issues, with clear, tiered resolution targets.

04

Performance Monitoring

Continuous KPI tracking keeps service quality visible and accountable.

COMMITMENT

We guarantee round-the-clock support for all critical client systems and infrastructure. Our centralized Helpdesk and Call Center serve as the primary contact point, ensuring every request is logged and tracked immediately on our dedicated contact numbers. Service starts the moment you call.

PERFORMANCE & ACCOUNTABILITY

We define performance using rigorous Service Level Agreements (SLAs) and strict response tiers. For emergency issues impacting critical assets, we guarantee priority response and target timely resolution — with accountability maintained through meticulous KPI tracking and formal quarterly performance reviews.

Why Choose Us

Four commitments behind every project we deliver

Plan For Success

We employ a robust, integrated methodology to anticipate challenges, ensuring predictable project execution and guaranteed long-term asset performance.

Attention To Detail

Our engineering focus on micro-level precision ensures zero tolerance for error, guaranteeing the quality and reliability required for mission-critical assets.

High Quality Standards

We adhere to verified international standards across all disciplines, ensuring every component, tool, and service delivers superior safety and performance.

Meeting Deadlines

We ensure timely project completion through integrated resource planning and proactive supply-chain control, delivering predictable results without compromising quality.

Our Clients

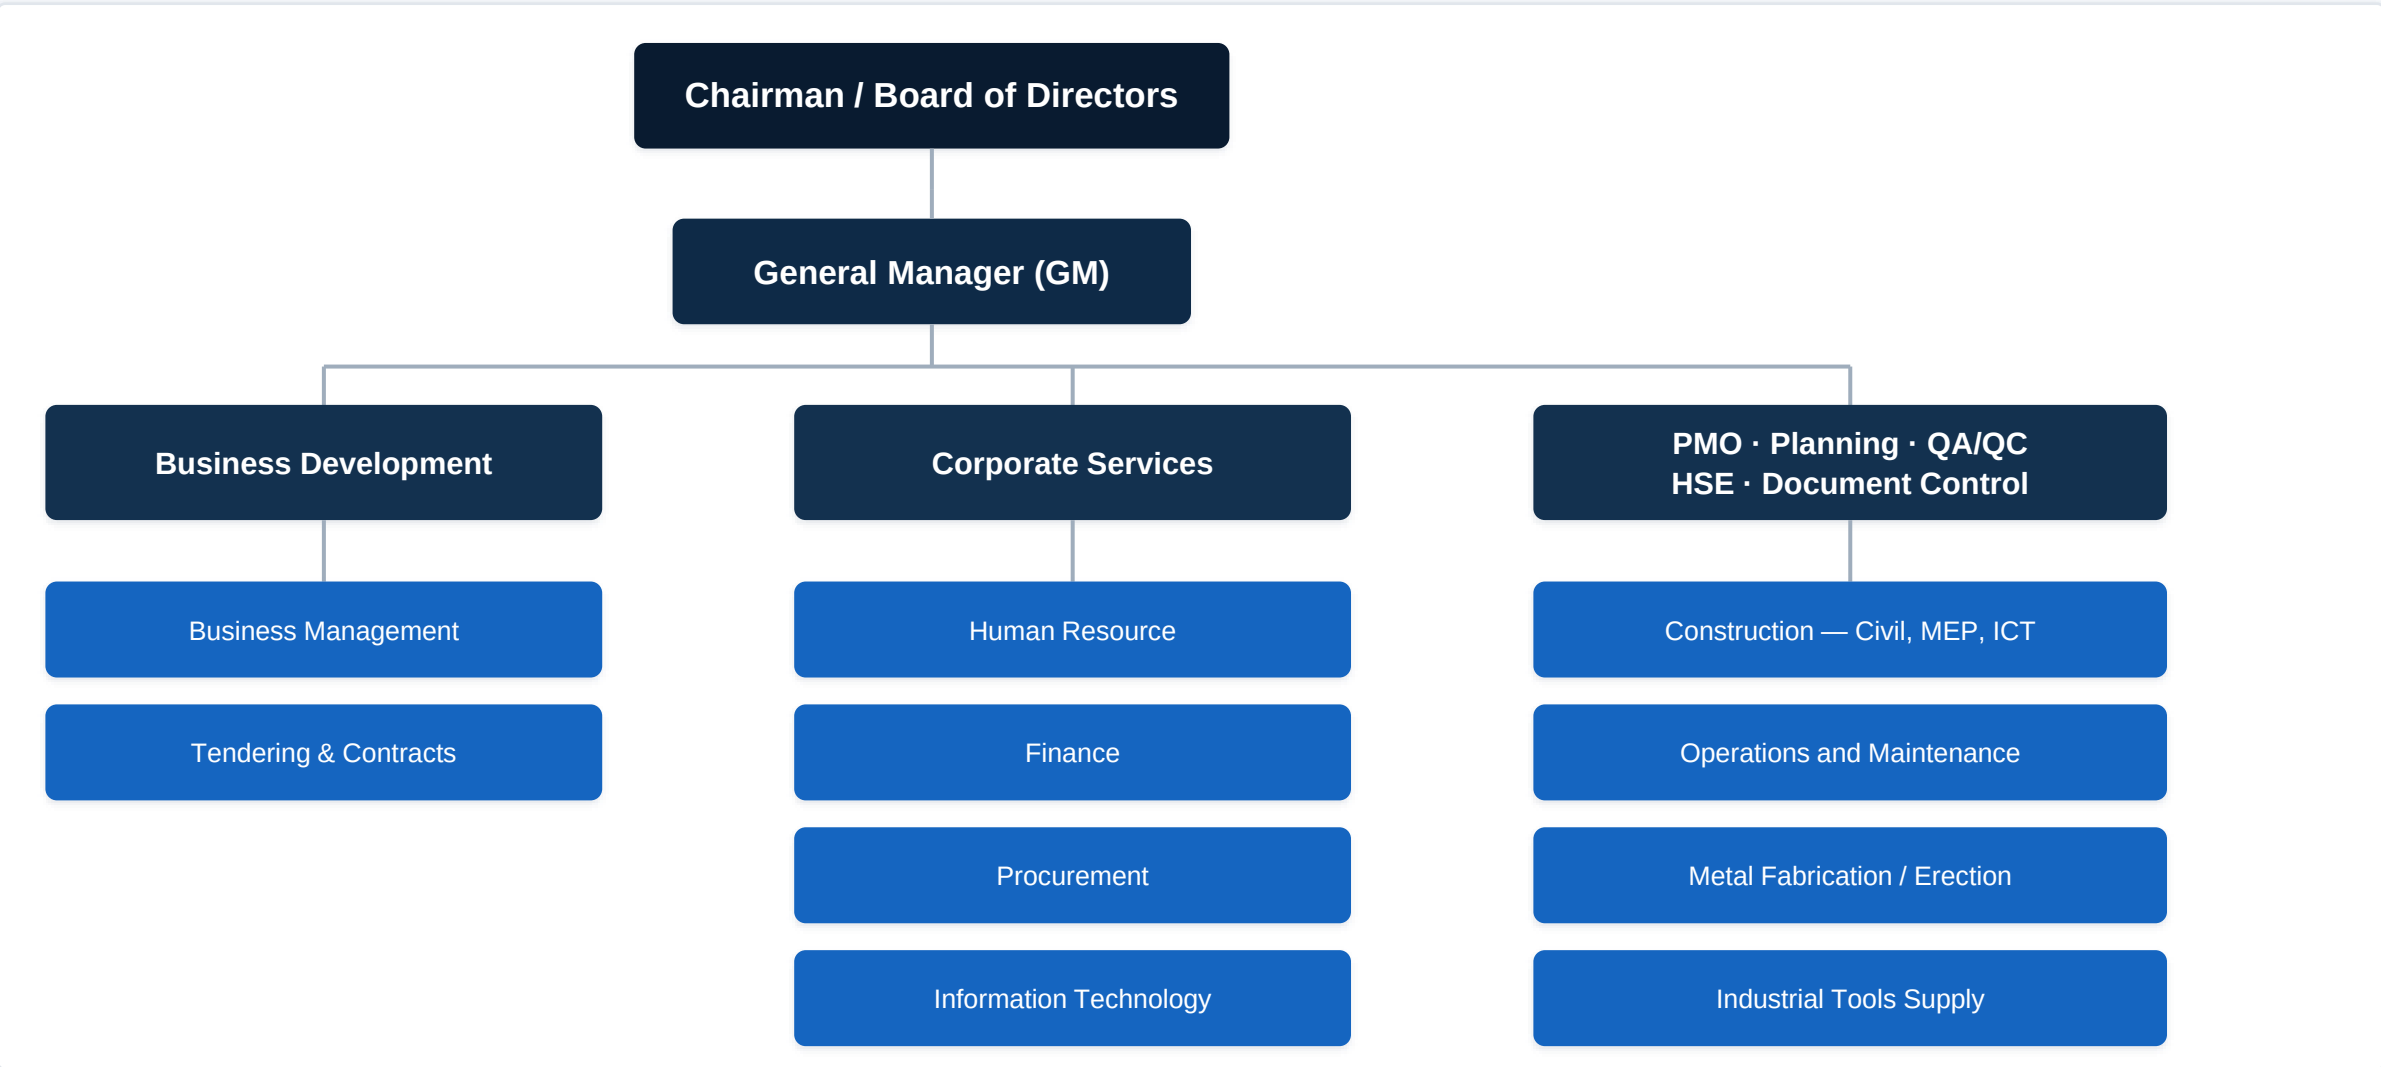

Trusted by leading names across energy, industry, and giga-projects

A cross-section of our client base — energy majors, giga-project developers, and leading EPC contractors across the Kingdom.
